Inmarsat D+	30 September 2014	30 December 2014	IsatData Pro
Inmarsat M	30 September 2014	30 December 2014	FleetBroadband or Fleet One

¹ Retirement Date marks the date after which no activations or re-activations are allowed and impacts re-flags.

² Termination Date marks the date after which the service is no longer available for commercial use.

³ FleetBroadband, Fleet One, Fleet Phone, and IsatPhone have no projected retirement and are expected to be available through 2028.

⁴ Inmarsat-C is not being terminated and is the only service Inmarsat has committed to migrate from I-3 Satellites to next generation I-4 satellites.

⁵ Inmarsat has made numerous strong recommendations all users of Fleet-77, Fleet-55, Fleet-33 or ISatM2M target 2016 as the year to upgrade off of these I-3 satellite service technologies.

⁶ MPDS (Mobile Packet Data Service) is one of two data services available with Fleet and the only one charged by amount of data used and not minutes data connection is left open whether used or not.

⁷ To motivate upgrades off Fleet, 1 Aug 2017 Inmarsat raised all Fleet data fees 40% to more than \$65 per MB.
